DETAILED ACTION

Allowable Subject Matter

- 1. Claims 1-5, 7-10 and 12-16 renumbered as claims 1-14 allowed.
- 2. The following is an examiner's statement of reasons for allowance.

Prior art or record fails to teach or fairly suggest a twisted pair status indicator, wherein the twisted pair status indicator is attached to an access terminal comprising a plurality of twisted pairs, comprising: a first indicator means for indicating that at least one of the plurality of twisted pairs is available; a second indicator means for indicating that none of the plurality of twisted pairs is available and a sliding mechanism for sliding from a first side of the indicator to reveal the first indicator means and for sliding to a second side of the indicator to reveal the second indicator means as recited in independent claims 1, 7 (renumbered as claim 6) and 12 (renumbered as claim 10) and shown in figure 2.

In other words, prior art of record fails to teach a twisted pair status indicator having a sliding mechanism, located on an access terminal that is used to indicate whether or not there are vacant pairs. If no pairs are available inside access terminal then the sliding mechanism would indicate that no twisted pairs available, thus saving the time it takes a technician to setup and find pairs when none are available.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
